

## What's New in Cayuse424 Version 3.4

### Subawards

A major focus of this release was to improve the development and management of Subawards. To this end, we have:

- Built Subawards.com, a public Web site where your non-Cayuse424 subcontractors can create their Subawards in a Cayuse424 environment and then send them to you for easy import and linking to your prime proposals.
- Added Subaward export to Cayuse424, so you can send your subaward proposals to other Cayuse customers
- Created the optional Subaward Import Module for Cayuse424, which allows easy import of subaward proposals from other Cayuse424 sites or from Subawards.com into a prime proposal or to your Proposals list.
- Added Subaward routing, so Subaward proposals can go through the Institutional approval process before they get sent to the extramural prime
- Improved the All Proposals List display and sorting of Subawards linked to proposals.

### Usability

#### *Performance*

We implemented performance enhancements to improve both the user experience and the performance of the entire system. Queries were optimized for display of Institutional Profiles and integrated Personnel list, Institutional Associations, Routing Profiles, Routing Chains, Autofill, and the Proposals list.

#### *Quick links*

On the budget page Key Persons now have a quick link to their profiles in case you need to correct or review information. Inside the proposal you will find a quick link back to the Proposals list.

#### *Key People "On-the-Fly"*

From the Autofill window you can add Key People directly to your proposal and generate a Professional Profile at the same time

#### *NIH UH2/UH3 mechanisms*

Validations for these new mechanisms were added along with other changes for NIH.

## List of fixes and enhancements

- Summary Page, Sponsor Deadline: Added a Date Chooser
- SF424 RR
  - ☑ Field 8: Added a validation on the description of Other Agencies when answered Yes
